

Galaxy Air Lights Power & Generator Guide

All Galaxy Air Lights units are **110V plug-and-play systems**. They are designed for quick setup and immediate operation—simply plug into a standard power source or generator and you're ready to go. Please note that these models are **not battery-powered**. A consistent 110V power supply is required for optimal performance. The chart below outlines the recommended minimum generator sizes for each model to ensure reliable operation and full brightness output.

Model	Power Consumption (Watts)	Recommended Minimum Generator Size
250W Balloon Light	250W	1,000W generator
400W Balloon Light	400W	1,500W generator
800W Balloon Light	800W	2,000W generator
