

OVERHEAD DOOR TRACK PROTECTION

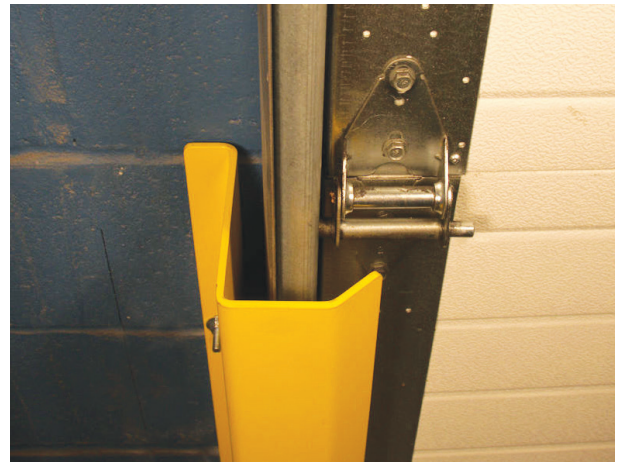

Protect Door Tracks
Reduce Maintenance Costs

Protect Overhead Door Tracks from damage by forklifts and other motorized warehouse equipment with Ideal Warehouse Innovations' line-up of Track Protectors. Consider the risks of having exposed door tracks:

- Costly maintenance requirements
- Increased security risks if the door can't be closed properly while awaiting repair
- Climate control issues
- Lowered productivity
- Difficulty getting replacement parts in a timely manner

Avoid these costly and time consuming problems with Track Protectors.

SLIM

TRACK PROTECTOR

OVERHEAD DOOR TRACK PROTECTION

SLIM TRACK PROTECTORS

Slim Track Protectors are made of 7-gauge steel for strength, have a safety yellow powder-coat finish for visibility and to resist corrosion.

- Narrow "slim" design for installation in areas where obstructions and tight door centerlines are a concern.
- Formed steel with 45° angle flange offers strong impact resistance (tougher than composite materials) and keeps impact away from the door track.
- The no floor plate design eliminates floor drilling, which reduces installation cost and allows for compact shipment stacking.
- Single unit construction permits installation on either side of the door.
- Available in standard 48" (1219mm) high with custom sizes available.

TRACK PROTECTORS

Track Protectors are made of 7-gauge steel for strength, have a safety yellow powder-coat finish for visibility and to resist corrosion.

- Formed steel with 45° angle flange and floor plate offers the strongest impact resistance (tougher than composite materials) and keeps impact away from the door track.
- Available in 24" (610 mm), 36" (915 mm) and 48" (1219 mm) tall sections with custom sizes available.

48"(1219mm)

36"(914.5mm)

24"(610mm)
